

R Tutorials' Course Tree

This is the ***R Tutorials' Course Tree*** which allows you to see how the courses are structured – they cover R programming intensively so that you are ready to branch out to your specific field.

The course tree itself has a 2 component foundation. The courses **R Basics** and **Level 1** contain all the necessary ingredients to bring you to an intermediate level in a short period of time. The courses are meant for total beginners, contain exercises and have a step by step approach that keeps you motivated and wanting to learn more.

As soon as you have a solid foundation you can branch out to specific fields. **Graphs in R**, **Statistics in R** and **Text Mining, Scraping and Sentiment Analysis** are advanced courses. You need to be familiar with R in order to benefit the most. You can choose the order in which you take them or even skip one if you do not work with those tools at all.

The **Machine Learning** course is even a more specialised course, which requires solid statistics knowledge, therefore it is recommended to do the **Statistics in R** course first. That makes sure that you have an optimal learning success.

You can always take a look at the course tree and check out which courses are best suited for your career and in which order you want to participate in them!

General Udemy Purchase Information:

**Depending on your location
the **currency** is adjusted
and **VAT (tax)** may be applicable!**
